# Air Traffic Management Continuity

What is the situation today?

Joe Sultana  
Director  
Network Manager

joe.sultana@eurocontrol.int

# Network Manager's Preparations on Strike Notification

- Strike preparation starts immediately it is notified
- Initial information with impacted airspace users – normally 4 days before
- Coordination with impacted ANSP & relevant CAA (senior management /Director Operations level) as to reduction in capacity expected
- Scenarios planning and coordination with adjacent ACCs (and FAA, NAV Canada) looking for increase in capacity which can support rerouted traffic - 2/3 days before
- Coordination with military for options to support scenarios with possible changes to their airspace requirements 2 days before
- Airspace users teleconferences (NM /ANSP) to communicate plan for next day

# Network Manager Operations – On Strike Day

**Network Manager**  
nominated by  
the European Commission

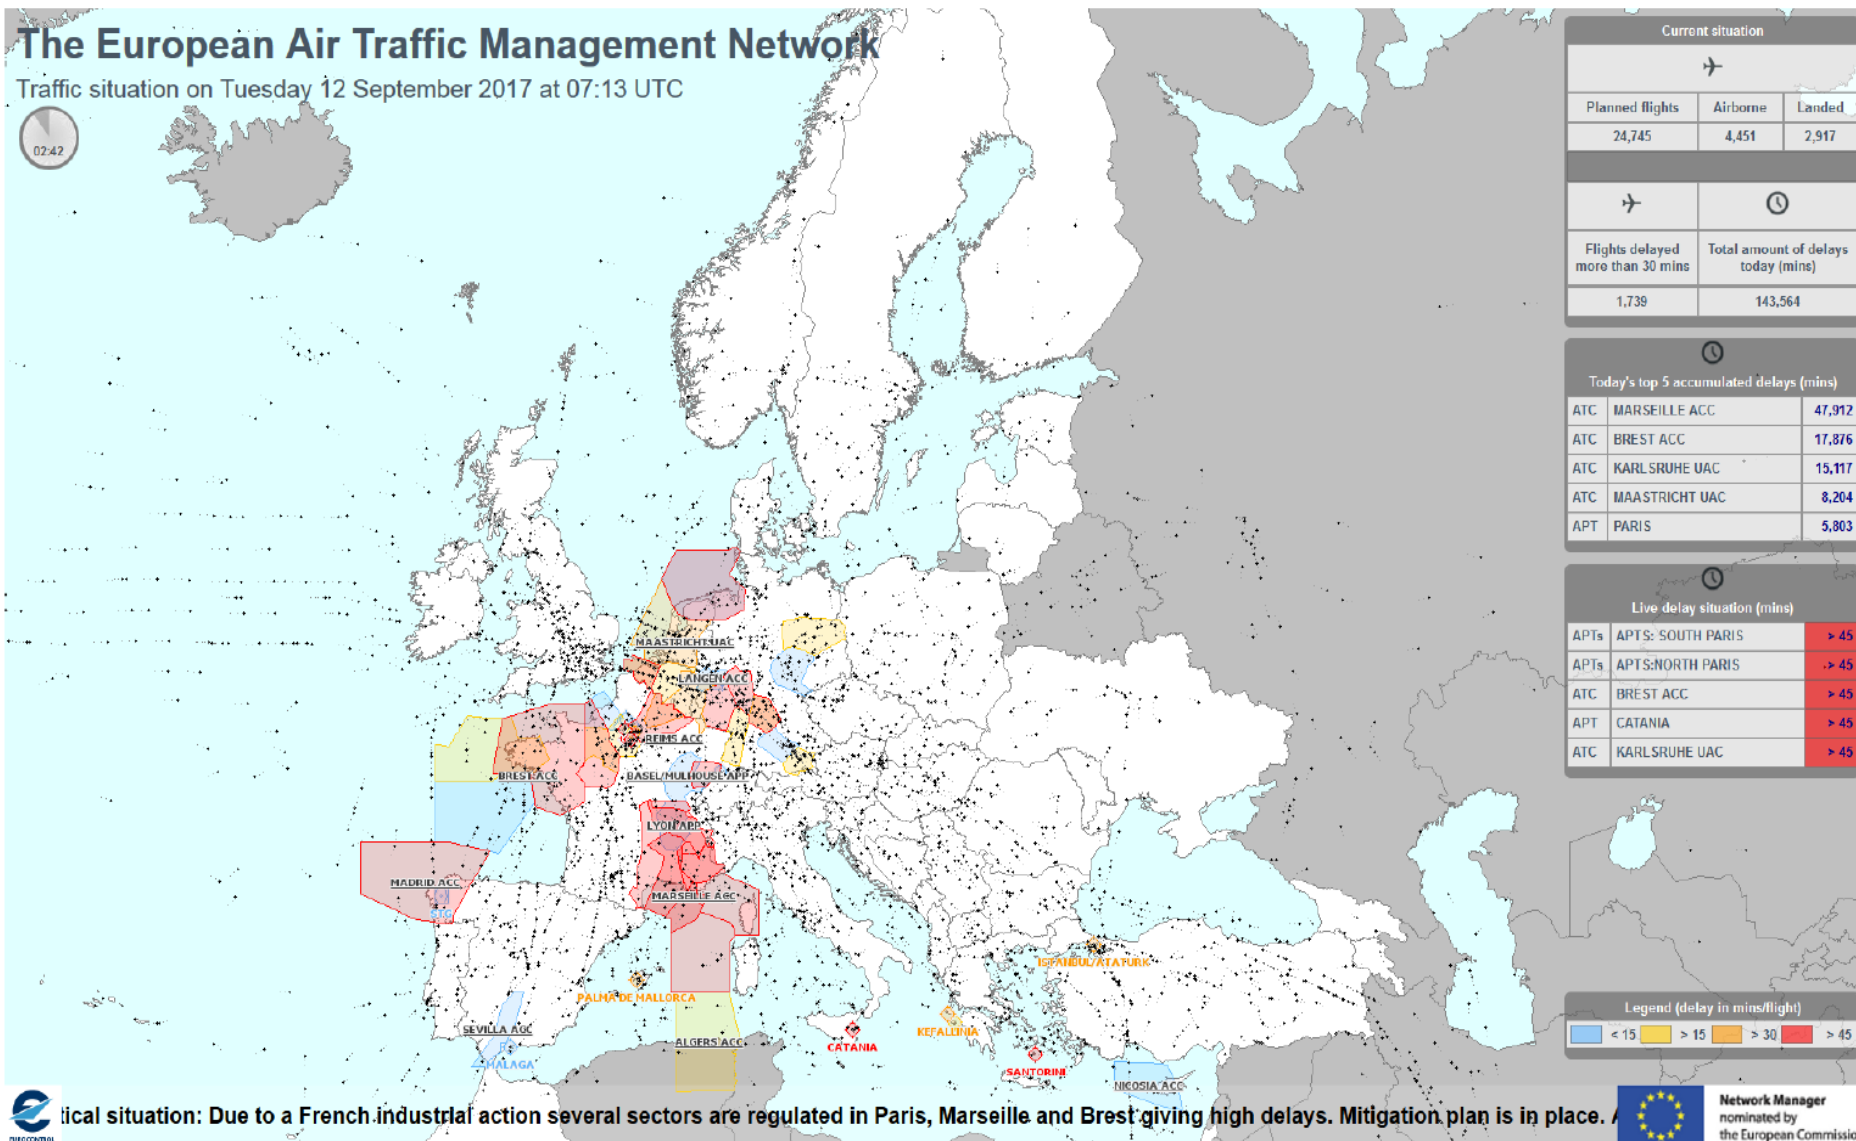

- Delay mitigation and Flow measures balancing demand against available capacity in place
- Depending on actual adherence to strike directive assessed per shift, flow measures reassessed
- Working closely with adjacent ACCs to help them manage increase in traffic in their airspace, including resulting delay reattribution
- Airspace users telco/direct contact (up to 1500+ calls on NMOC Helpdesk) to update and address specific flights needing special priority, balance delays against extra mileage
- Prepare for resumption of full service, minimise delays to flights backlog

# The European Air Traffic Management Network

Traffic situation on Tuesday 12 September 2017 at 07:13 UTC

07:42

Actual situation: Due to a French industrial action several sectors are regulated in Paris, Marseille and Brest giving high delays. Mitigation plan is in place.

# Impact of strikes on flight efficiency

- High impact strikes lead to 200k extra nautical miles per day
- Around 800k nautical miles lost on FPL this year (1300k last year)

## Final Remarks

- Will earlier notification help?
- Would a cooling off period make a difference?
- Will rule 'no impact on en-route traffic' be effective, is it feasible?
- What about technical failures, what is the risk to ATM continuity?
- Is contingency at FAB a possible future objective for SES?

The best possible network performance every day is  
the *raison d'être* of the Network Manager – what else can we do?
