

Climate adaptation Kokkedal

Marianne Lundberg
Resident and Chairman
at Cooperative Housing
Association
Hørsholm Kokkedal

An aerial photograph of a residential neighborhood. On the left, there are rows of modern, multi-story apartment buildings with grey roofs and light-colored facades. To the right of the buildings is a large, green, open space. A winding waterway, possibly a stream or a small canal, flows through this green space. The waterway is bordered by lush green grass and trees. A dirt path or trail follows the curve of the waterway. In the foreground, there is a large, dark, irregularly shaped pond or lake. A small bridge or walkway crosses the waterway near the pond. The overall scene is a mix of urban development and natural green space.

Climate adaptation Kokkedal

What was once a climate-threatened area has been transformed into an attractive and recreational space, enjoyed by all the citizens from both public housing and private homes.

Climate adaptation Kokkedal

A group of people, including a man in a dark jacket with orange accents and a woman in a black quilted jacket, are walking along a dirt path next to a river. The background shows bare trees and a grassy area, suggesting a late autumn or winter setting.

The project has attracted many prominent study visits, most recently from Denmark's Minister of the Environment and Gender Equality
