Rabobank

The WaterBank

Connecting supply and demand for circular use of water

THE PROBLEM

Water is becoming scarce. And we are using more.

2×

Water demand will double
by 2050

Drought & quality

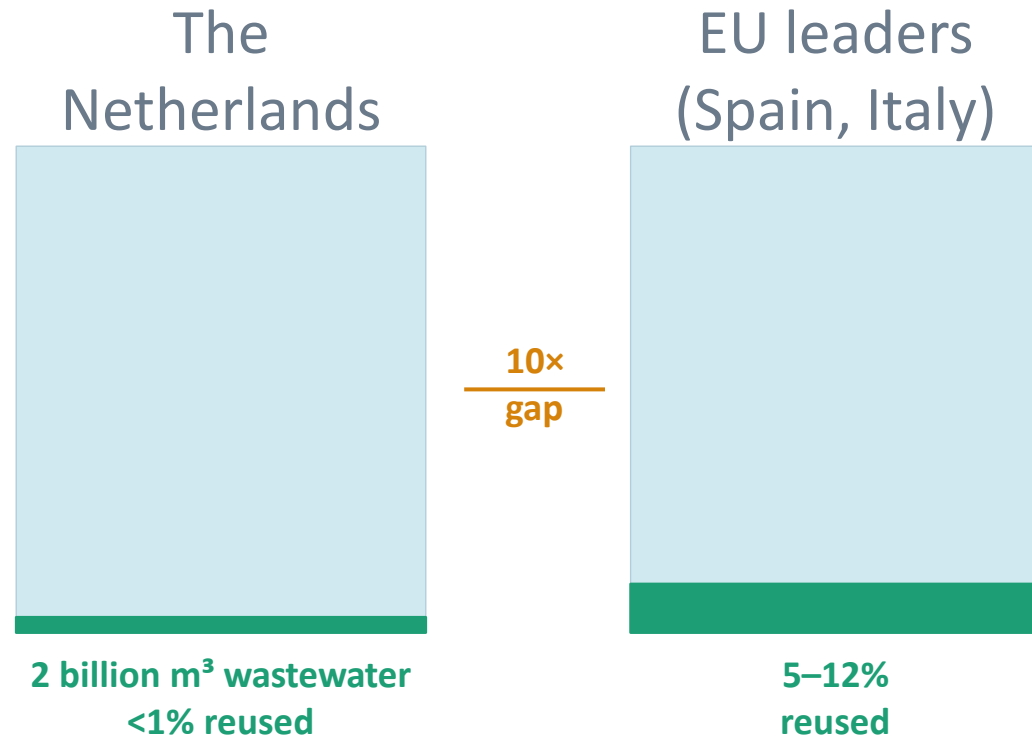

Climate change brings longer dry
spells, and pollution threatens what
remains.

€0

Economic price of water
does not reflect its scarcity

More demand. Less supply. And still: water is priced as if it is infinite.

Effluent is discharged. Rainwater is not captured.

Circular water can supply:

- Agriculture & irrigation
- Industrial process water
- Data centre cooling
- Groundwater recharge

The WaterBank

A cooperative platform. not-for-profit, public & private.

Water boards
& governments

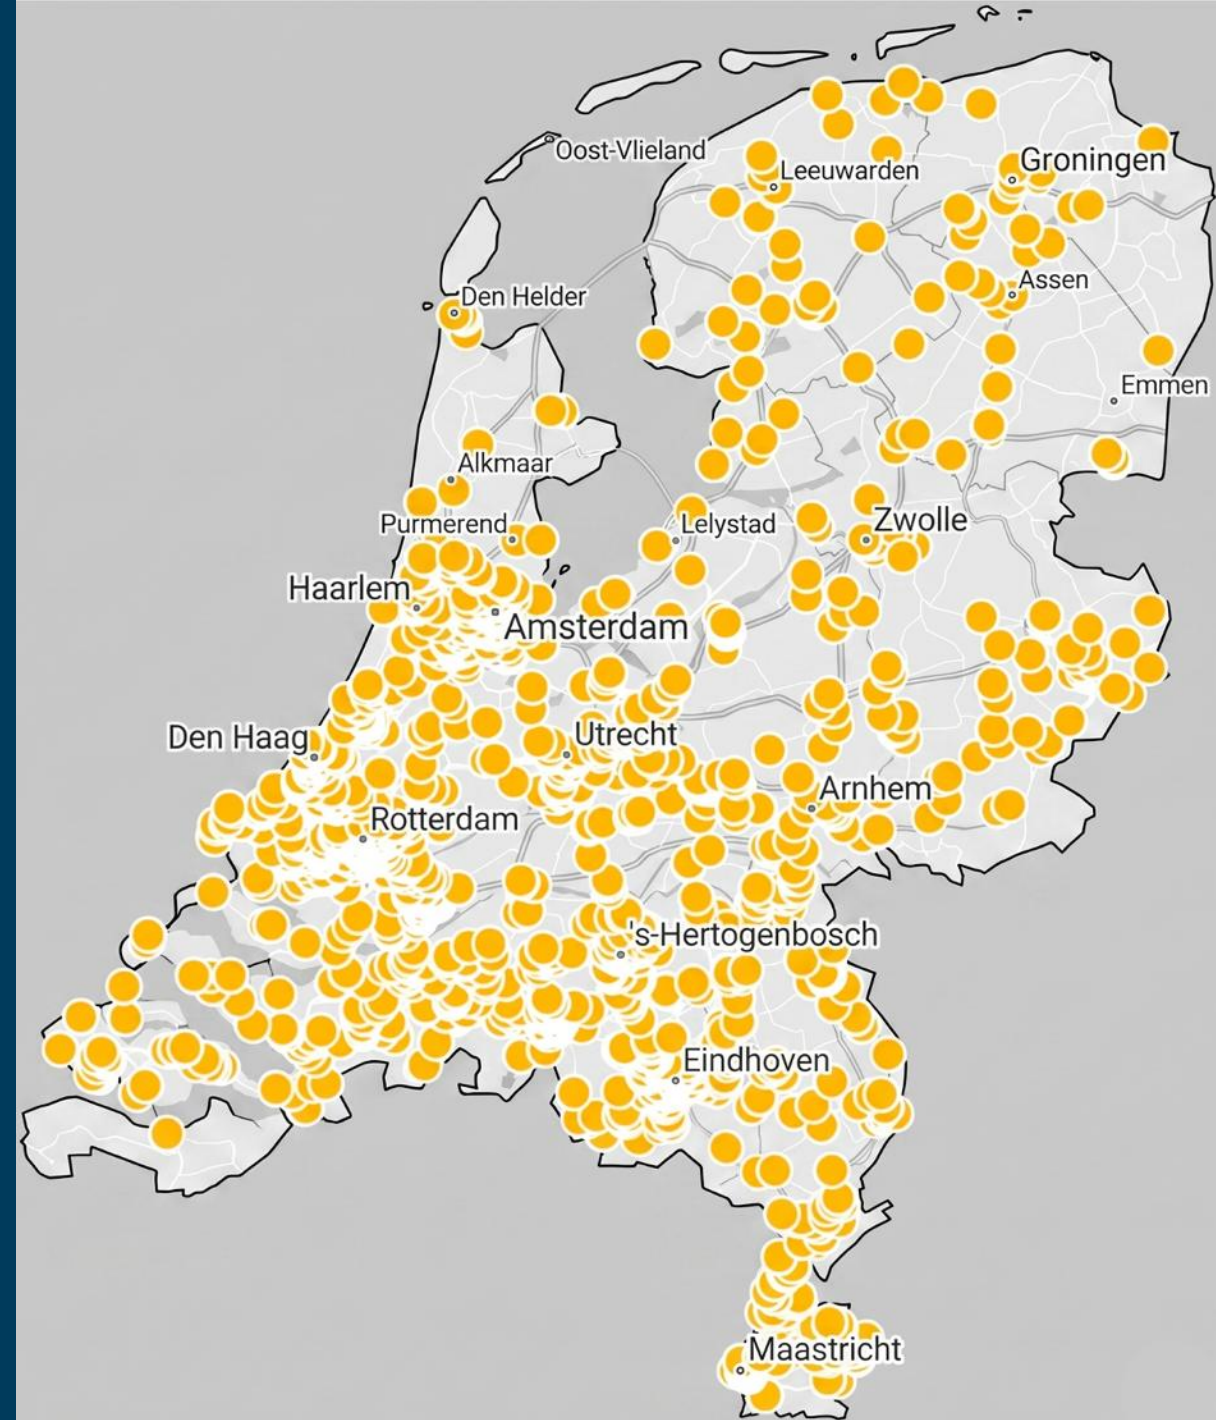

Companies
& watertech

Banks
& funds

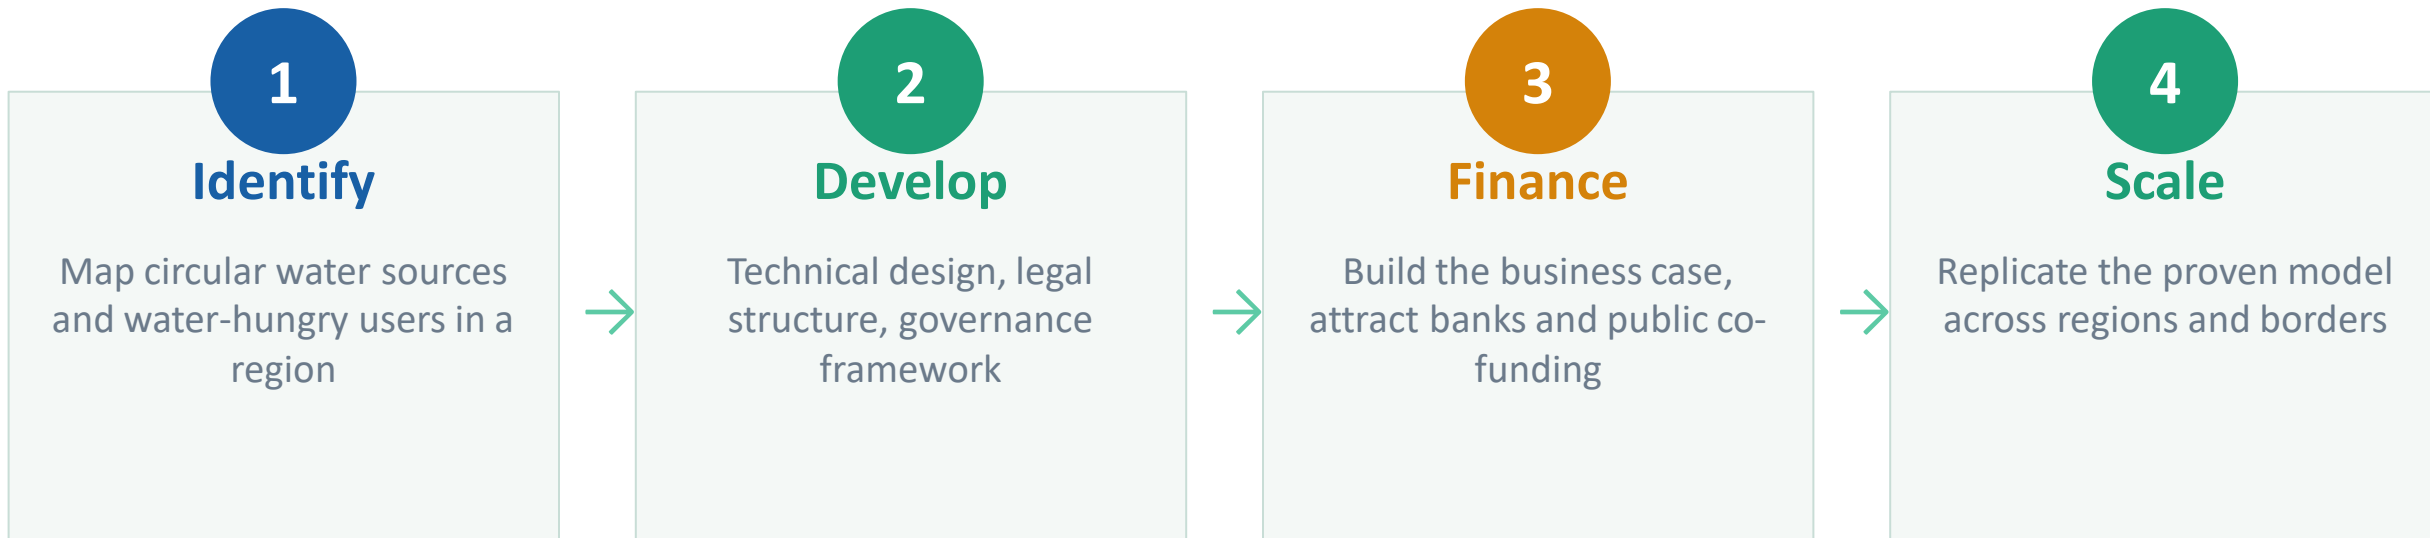

The WaterBank sits in the middle — structuring deals, de-risking projects, making the market work.

The Waterbank drives
circular waterdeals.

Local impact scaled
nationally.

From discharge to reuse — four steps.

Each project becomes a template. Every deal we close makes the next one easier.

Three conditions to unlock the market.

01

Public-Private Partnership

Water boards, municipalities and private sector sharing risk and benefit. No single party can do this alone.

02

Bankable Projects

Standardized structures, funding pipeline, seed funding. Unlock future benefits and costs (true value).

03

Scale & Replication

Local problems scaled nationally. Develop with the bigger picture in mind, prepare to replicate

Thank you!
