

OpenECI

A vision to Digital Democracy

Development process

- Open source is meant to be developed with the community
- From the very start of the project (goals, requirements)
- Open source means diversity, organic evolution, freedom of choice, lean management, consensual decisions
- Open development process for the people and by the people

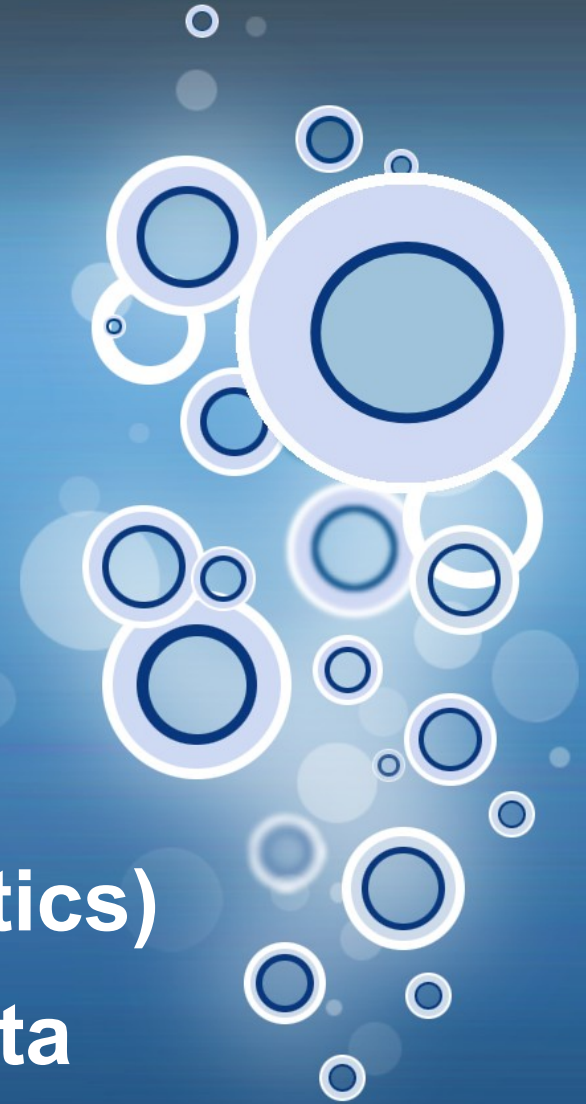

Architecture

- Flexible modular system / software design (**Keep It Stupid Simple**)
- Use up to date **easy to use software libs** matching the requirements
- **Clearly separate Frontend from Backend**

OpenECI Features

- **Embeddable frontend for campaign websites**
- **Supports partner channels (tagging votes to allow better campaign performance statistics)**
- **Allows prefilling of personal data**
- **Allows complete customizing of frontend (CSS, JS, HTML)**

Future Features

- Support national E-Ids
(e.g. Austria: Handysignature)
- Create an central EU e-mail / ID
for each citizen
- Allow to sign ECI by two factor
authentication (using central EU ID)
- ECI app for smartphones/web to allow
signing all current ECIs more easily
