The beyond GDP mission: shaping a regenerative, resilient wellbeing economy

Regeneration

Resilience

Wellbeing

A scenic photograph of a mountain range. The foreground shows steep, green slopes with patches of snow and small evergreen trees. In the background, jagged mountain peaks are partially obscured by a thick layer of white mist or low clouds. The overall atmosphere is serene and majestic.

A compass towards a regenerative,
resilient wellbeing economy?

State of play: Current dashboards not suited to address these needs

Social & Environmental Goals Dashboard/Process	Political voice	Peace & justice	Income & work	Food	Health	Education	Gender equality	Water	Networks	Social equity	Housing	Energy	Air pollution	Climate change	Ozon layer depletion	Biodiversity loss	Chemical pollution	Ocean acidification	Land conversion	Fresh water withdrawals	Nitrogen & phosphorous

• **None of the assessed dashboards can serve as a political summary for a beyond GDP agenda**

- **SDGs:** scope is too broad, not fully consistent with the EU’s political agenda
- **Resilience Dashboards:** purpose is about monitoring the “ability to make progress” rather than measuring progress itself
- **8th EAP MF (draft):** lacks social and economic indicators

• **Risk of silos** due to a too-narrow focus on specific policy areas

• **Lack of compelling narrative and visualisation**

PINK: no indicator is included **BLUE:** a maximum of two indicators is included
GREEN: more than two indicators are included

A misty mountain landscape with green slopes and snow-capped peaks. The foreground shows a steep, grassy slope with some small trees. In the background, several jagged mountain peaks are visible, some covered in snow and partially obscured by a thick layer of mist or fog. The overall atmosphere is serene and majestic.

Our idea: taking inspiration from Doughnut Economics

Doughnut Economics as an overarching frame

“The Doughnut model can guide how we think about the Green Deal.”

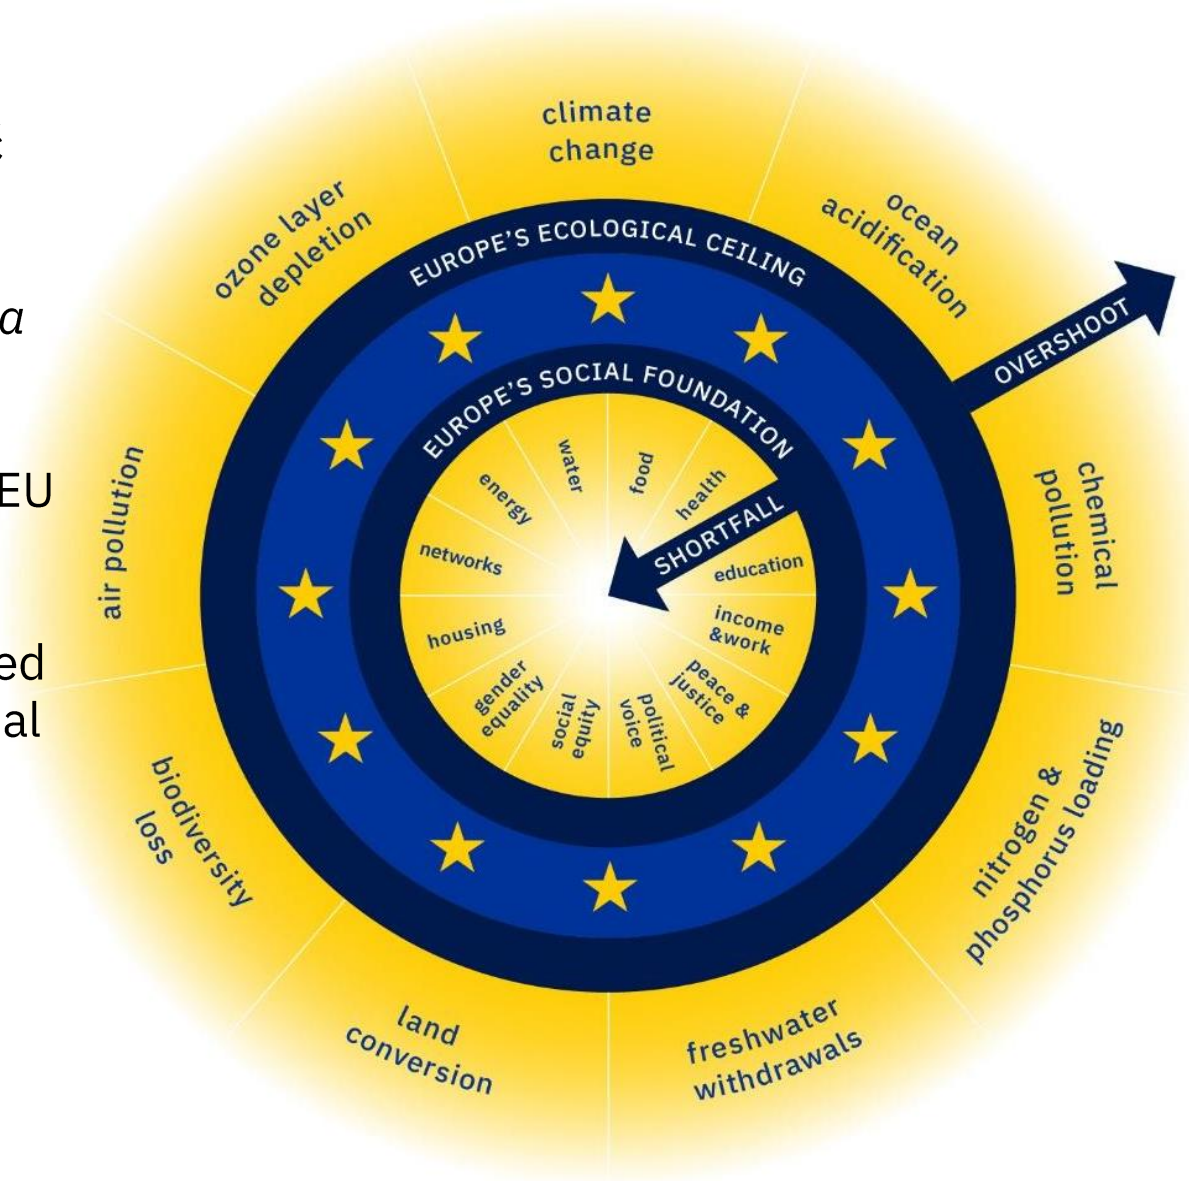

EVP Maroš Šefčovič

“The Doughnut model is a possible basis for developing a coherent monitoring framework that includes different indicators into a single frame.”

Informal COM Working Group Doughnut4EU

The Doughnut

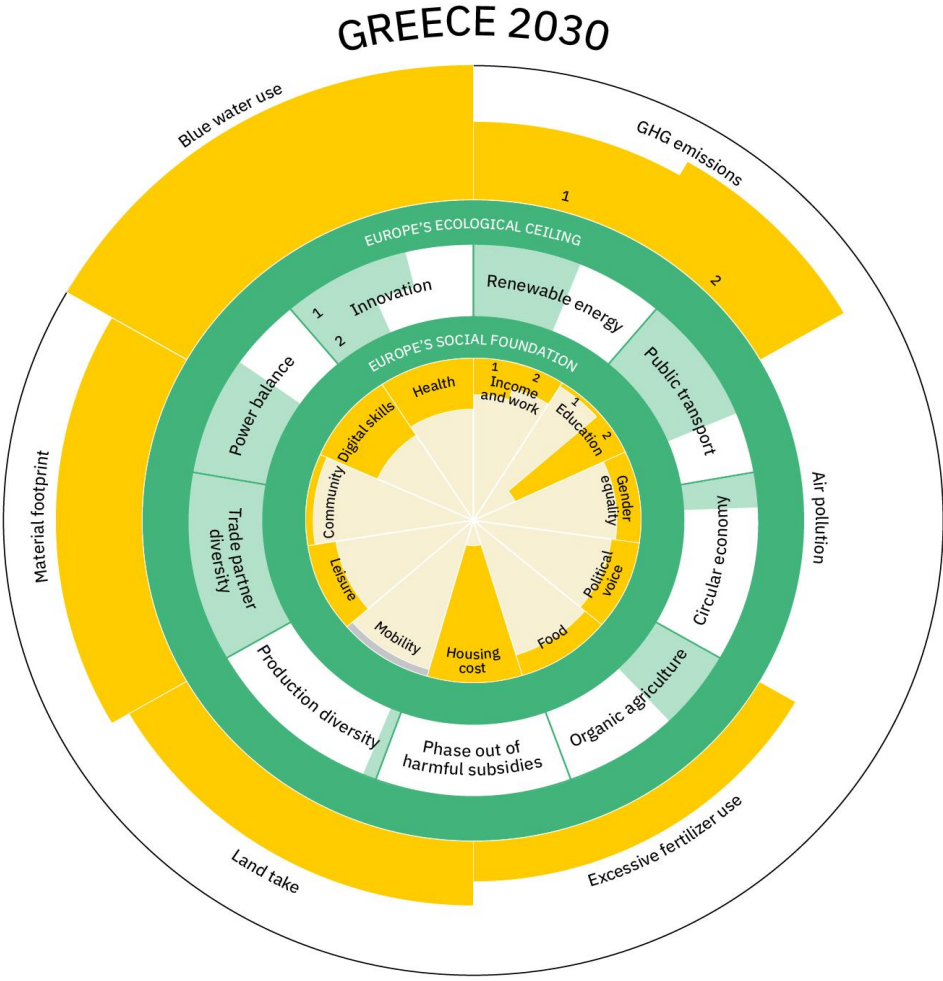

- › Provides an **overarching frame** that points at the need to **balance** the environmental sustainability and social cohesion by means of a resilient economy
- › Provides a **clear visual representation** of the EU’s priorities for 2030 and **tracks its position** in those different aspects.

A first look at the Doughnut portraits for 2030

A first look at the Doughnut portraits for 2030

The relation of indicators to existing dashboards

Quick evaluation of the proposal

The dashboard meets the following criteria:

Overarching and systemic Maps how the EU performs in key sustainability, wellbeing and resilience aspects	Big picture Brings together selected indicators from different dashboards	Coherent with priorities Builds on the priorities of the Commission (EGD, SDGs, EU Semester, social scoreboard)	Long term Made to last so policy makers are accountable to meet mid- and long-term objectives (2030-2050)	Appealing and ambitious Speaks to the needs of people while acknowledging the needs for change	Easy to understand Limits the set of indicators to 20-30, use easy to understand indicators
---	---	---	---	--	---

The benefits of a beyond GDP compass

- **Political summary for progress** on the EU's political priorities and systemic changes required
- **Quickly grasp the EU's most important trends**
- **Identify important tensions** that need to be balanced
- provide a basis for **inform policy development.**
- Create **buy-in of society** as a whole: the target audience is not only Member States but also social partners, businesses and EU citizens.

→ **Momentum for a compass in the form of an overarching beyond GDP dashboard is there: 8th EAP, Proposal from the Social Partners**

Defining with targets for 2030

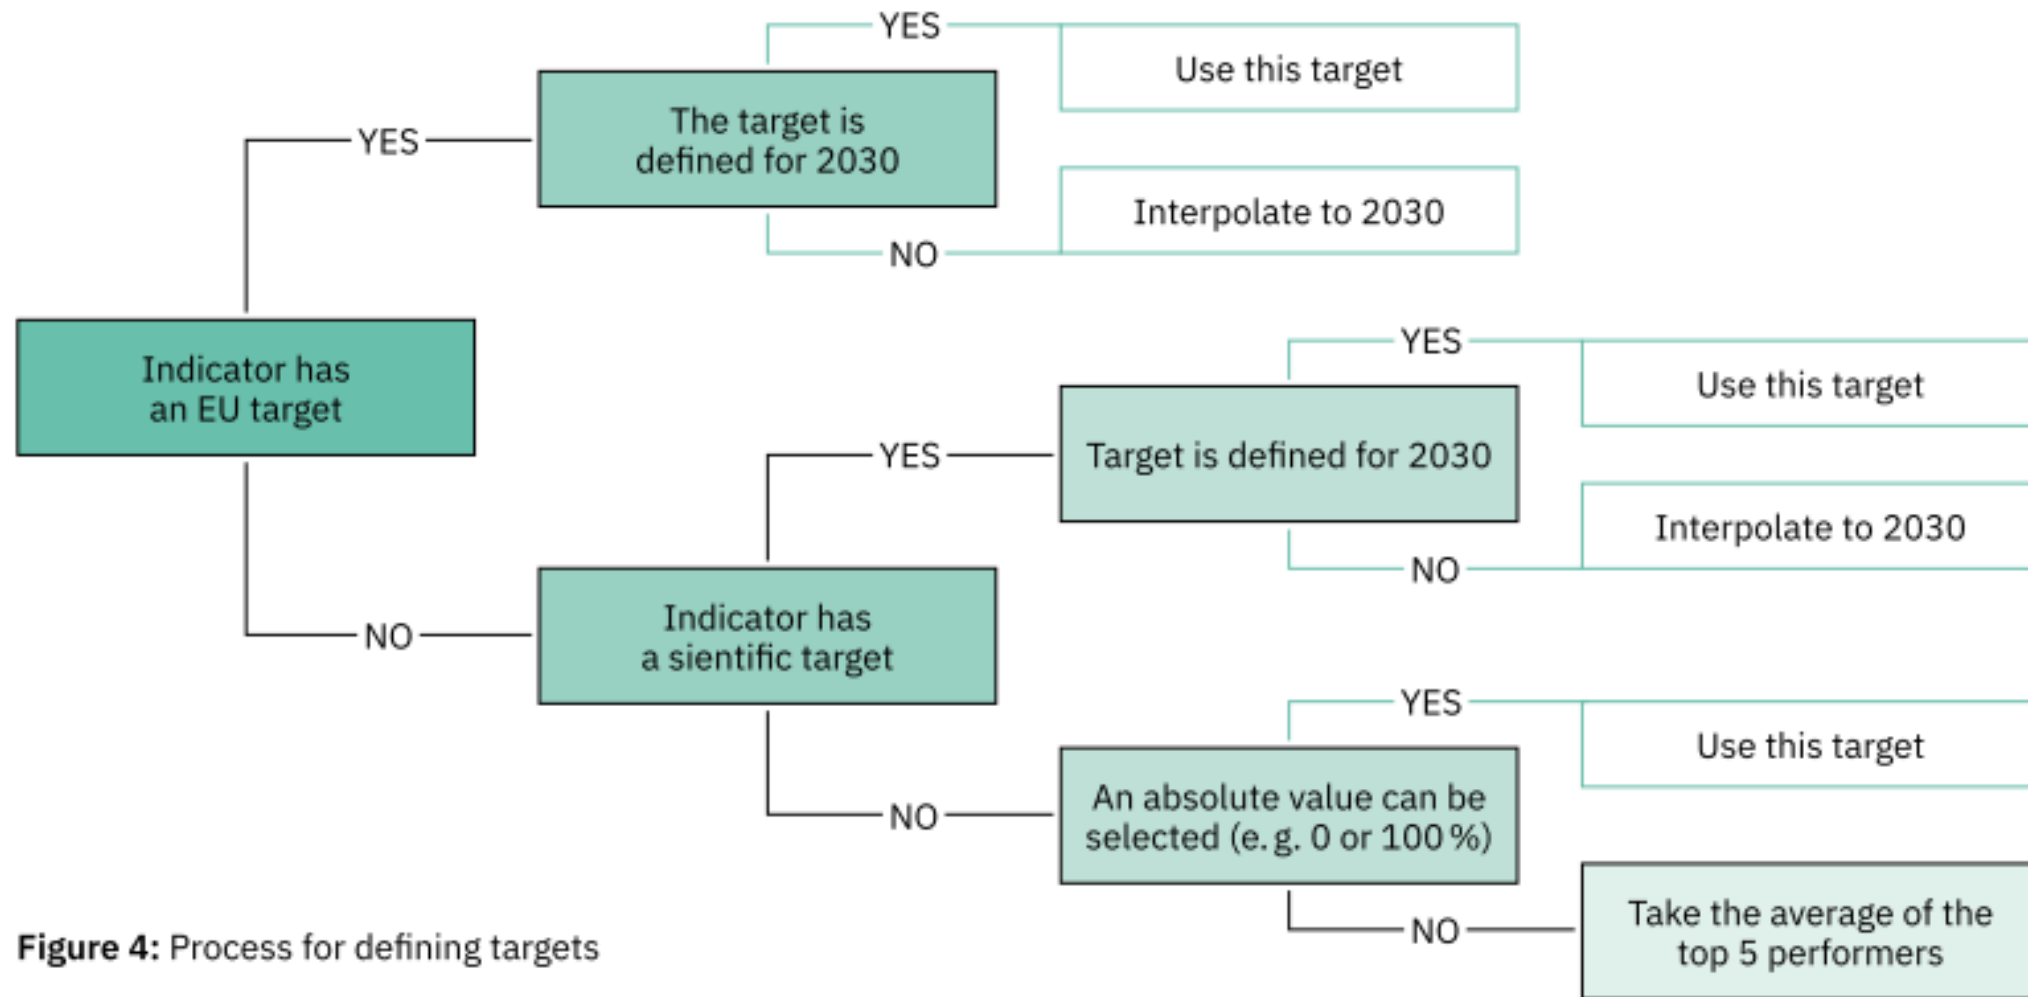

Figure 4: Process for defining targets

Conclusion and recommendations

Seven recommendations for the EESC

Call for

1. a condensed **beyond GDP** dashboard and discuss, whether this can be integrated with the European Green Deal Dashboard
2. the application of **Doughnut Economics as a new narrative** for social and environmental priorities of economic progress
3. **defining a targets** for indicators and using a **distance-to-target** for monitoring to improve understandability
4. Incorporating the beyond GDP dashboard into a **governance process** like the 8th EAP, including the regular evaluation of progress and definition of actions to achieve targets
5. institutionalising beyond GDP indicators through the **further enhancement of the EU's environmental accounts and the development of social accounts**
6. **updating current indicators** and increase their timeliness to track the EU's objectives
7. developing additional **indicators for measuring economic resilience (adaptability, transformability) and the leave-no-one behind principle**

Jonathan Barth

Managing director at ZOE-Institute for Future-fit Economies

Thank you

The biophysical and social indicators and targets

Label	Indicator name	EU target by 2030* [unit]
GHG emissions 1	<i>GHG Emissions</i>	-55 [%] (EU target)
GHG emissions 2	<i>GHG Emissions</i>	-62 [%] (scientific target)
Air pollution	<i>Exposure to air pollution by particulate matter (PM2.5)</i>	MS specific [%]
Excessive fertilizer use	<i>Gross nutrient balance for agricultural land</i>	0 [kg of nutrient per hectare]
Land take	<i>Net land take</i>	331 [km2/year]
Material footprint	<i>Material footprint per capita</i>	14117 [kg per capita]
Blue water use	<i>Water exploitation index plus</i>	10 [%]

Label	Indicator name	EU target by 2030* [unit]
Health	<i>Self-reported unmet needs for health care (total per MS)</i>	0 [%]
Leisure	<i>Long working hours in main job</i>	0 [%]
Community	<i>Persons who have someone to discuss personal matters</i>	100 [%]
Digital skills	<i>Individuals who have basic or above average digital skills</i>	80 [%]
Education 1	<i>Tertiary education attainment as share of students</i>	45 [%]
Education 2	<i>Share of adults participating in training annually</i>	60 [%]
Income and work 1	<i>Employment rate age group 20-64 as a share of total population</i>	78 [%]

	EU target
	Scientific target
	Absolute target (e.g. 0 or 100%)
	Average of top 5 performers

Income and work 2	<i>People at risk of poverty or social exclusion</i>	17 [%]
Gender equality	<i>Gender employment gap</i>	/2 [unit]
Political voice	<i>Voter turnout</i>	77 [%]
Housing cost	<i>Housing cost overburden rate by income quintile (first quintile)</i>	12 [%]
Food	<i>Inability to afford a meal with meat, chicken, fish (or vegetarian equivalent) every second day</i>	0 [%]
Mobility	<i>Self-reported unmet needs for mobility</i>	0 [%]

Indicators and targets: policy levers and enablers

Label	Indicator name	EU target by 2030* [unit]
Innovation 1	<i>Research and Development expenditure (% of GDP)</i>	3 [%]
Phase out of harmful subsidies	<i>Fossil fuel support as a share of GDP</i>	0 [%]
Renewable energy	<i>Share of renewables in final energy consumption</i>	40 [%]
Public transport	<i>Share of busses and trains in total passenger transport</i>	25 [%]
Circular economy	<i>Circular material rate</i>	24 [%]
Organic agriculture	<i>Share of land under organic farming</i>	25 [%]
Innovation 2	<i>Eco-innovation index</i>	154 [Score]
Production diversity	<i>ECI index</i>	1.81 [unit]
Power balance	<i>Labour income share as a percent of GDP</i>	70 [%]
Trade partner diversity	<i>HHI for trade partners</i>	22 [%]

*See justification of targets in the supplementary information

Justifications of the targets

Indicator name	EU target by 2030 [unit]	Justification of target
GHG Emissions	-55 [%] (EU target) -62 [%] (scientific target)	The EU target comes from the European climate law and European Climate Target plan. However, scientific studies show that the fair share of the EU corresponds to a 62% reduction. According to calculations by Cornet et al., this is feasible if best practices are applied by MS.
Exposure to air pollutants (PM2.5)	MS specific [%]	Set by the National Emission Reduction Commitments at MS level in 2005 with 2005 as the base year based on WHO guidelines.
Gross nutrient balance for agricultural land	0 [kg of nutrient per hectare]	No EU target but scientific target points towards 0 since $GNB > 0$ leads to eutrophication and $GNB < 0$ leads to a low fertility.
Net land take	331 [km ²]	The Roadmap to a Resource Efficient Europe (COM(2011) 571) to reach net zero land take by 2050. The value for 2030 was calculated by linear interpolation.
Material footprint per capita	14117 [kg]	No EU target so a scientific target was used from the literature. It was calculated by interpolation between the most recent value for the EU and the target for 2050 from Bringezu (2015).
Water exploitation index, plus	10 [%]	No EU target but under 10% corresponds to low water scarcity and is thus a desirable outcome.

Justifications of the targets

Indicator name	EU target by 2030 [unit]	Target justification			
Self-reported unmet needs for health care (total per MS)	0 [%]	SDG 3 (3.8): "Achieve universal health coverage". Target of the Europe Sustainable Development Report.	People at risk of poverty or social exclusion	17 [%]	Target to be adopted with the new European Pillar of Social Right's action plan in Q4 2021. The target is to decrease by 15 million people but this equals keeping the ratio to under 17% of the EU population.
Long working hours in main job	0 [%]	Long hours impact the amount of leisure and therefore wellbeing.	Gender employment gap	/2 [unit]	Target to be adopted with the new European Pillar of Social Right's action plan in Q4 2021.
Persons who have someone to discuss personal matters	100 [%]	EU average of 93% and having relatives present for you is a factor of wellbeing.	Voter turnout	77 [%]	No official target from EU so target calculated as the average of the top 5 performers.
Individuals who have basic or above average digital skills	80 [%]	Target from the European Pillar of Social Rights Action Plan.	Housing cost overburden rate by income quintile (first quintile)	12 [%]	No EU target and EU average of 32% so target calculated as the average of the top 5 performers.
Tertiary education attainment as share of students	45 [%]	Target from the EU Council's resolution (2021/C 66/01).	Inability to afford a meal with meat, chicken, fish (or vegetarian equivalent) every second day	0 [%]	Based on SDG 2 (2.1, zero hunger which states "ensure access by all people [...] to safe, nutritious and sufficient food all year round".
Share of adults participating in training annually	60 [%]	Target to be adopted with the new European Pillar of Social Right's action plan in Q4 2021.	Self-reported unmet needs for mobility	0 [%]	Based on SDG 11 (11.2), of which the aim is to "provide access to safe, affordable, accessible and sustainable transport systems for all".
Employment rate age group 20-64 as a share of total population	78 [%]	Target to be adopted with the new European Pillar of Social Right's action plan in Q4 2021.			

Justifications of the targets

Indicator name	EU target by 2030 [unit]	Target justification
Research and Development expenditure (% of GDP)	3 [%]	This target is set to 20% based on the lowest OECD average since the financial crises of 2010.
Fossil fuel support as a share of GDP	0 [%]	Proposal in the 8th EAP supported by the Council of the EU and the EP.
Share of renewables in final energy consumption	40 [%]	Target from the Fit for 55 package. MS have own targets based on the Renewable Energy Directive which were kept when more ambitious than Fit for 55 target.
Share of busses and trains in total passenger transport	25 [%]	Target proposed to DG ENVI in Think2030 report by the IEEP.
Eco-innovation index	154 [Score]	No EU target thus the average of the top 5 performers was calculated.
ECI index	1.81 [unit]	No EU target thus the average of the top 5 performers was calculated.
Labour income share as a percent of GDP	70 [%]	According to Bowley's law, the wage share should remain constant and it was considered as a stylised fact of the inclusiveness of economic development. It was around 70% in the 1970s and suffered a steep drop in the 1980s while GDP kept increasing.
HHI for trade partners	22 [%]	No EU target thus the average of the top 5 performers was calculated.
Circular material rate	24 [%]	Target from the EU circular economy action plan to double the circular material rate.
Share of land under organic farming	25 [%]	Target from the EU Farm to Fork strategy.
